

# Week in Review—Autonomous Roundup

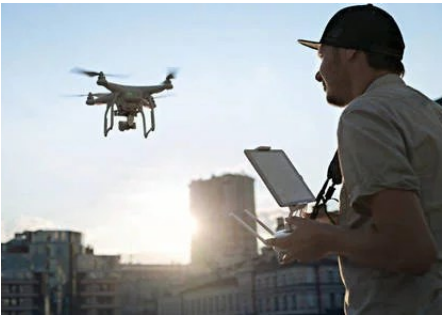

Wednesday, March 4, 2020

James Chapman, Chair  
Autonomous and Unmanned Systems Group

## This Week's Highlight

Our favorite report this week about a new, but not so far-fetched, reality. Elon Musk advises U.S. Air Force General to prepare for space warfare. Musk predicts wars will soon be fought using [unmanned drones and space-based technology](#)!

## New FAA proposal would require drones to stay constantly connected to internet to give Feds real-time location data

The requirement would ground an estimated 80% of drones in the U.S., and many would never be able to fly again; unable to be retrofitted with necessary equipment.

## Navy moves to low-rate initial production of minehunting unmanned surface vessel

U.S. Navy unmanned surface vessel (USV) experts are making the first production purchase of unmanned boats to clear large areas of sea mines that would threaten their ocean assets.

## Drones a growing use case for insurance adjusters

Unmanned aircraft vehicle usage is on the rise when processing insurance claims for crops and farmland. The UAVs can also be used for other kinds of claims as well.
